

API AWARDS NOMINATION

Best API Integration Project

Nomination One-Pager | 2026 API Awards

EXECUTIVE SUMMARY

ERP Integration Hub is an API-first integration platform that transforms legacy ERP environments into connected digital ecosystems. Rather than forcing organizations through multi-year, high-risk ERP replacement projects, the hub creates a modern abstraction layer that exposes existing ERP data and business logic through secure, standards-based REST APIs—enabling mobile applications, business intelligence, AI services, and external platforms to consume ERP data in real time without ever touching the core system.

API-First Architecture REST, OpenAPI 3.0, OAuth 2.0, and event-driven microservices	ERP Modernization Extend SAP, Oracle, JDE, Dynamics without replacement
Digital Transformation Enable mobile, BI, AI, and e-commerce on legacy data	Integration Innovation Composable, real-time, AI-ready integration fabric

AWARD CRITERIA ALIGNMENT

TECHNICAL EXCELLENCE	BUSINESS IMPACT	DEVELOPER EXPERIENCE	INNOVATION
REST / OpenAPI / OAuth 2.0 / TLS 1.3	Real-time ERP modernization at scale	SDKs, docs, sandbox environment	AI-ready, event-driven, composable architecture

KEY CAPABILITIES

- Secure REST API gateway with OAuth 2.0 / JWT authentication and role-based access control
- Pre-built connectors for SAP, Oracle EBS, JD Edwards, Microsoft Dynamics, Infor, and Sage
- Real-time data access with webhook-driven events, batch ETL, and change-data-capture streaming
- AI-ready architecture with structured data services designed for LLM and ML pipeline consumption
- Microservices-based design enabling independent deployment, scaling, and fault isolation

- Comprehensive developer portal with OpenAPI documentation, SDKs, and interactive sandbox

WHY THIS PROJECT DESERVES RECOGNITION

ERP Integration Hub solves one of the most pervasive and expensive problems in enterprise IT: unlocking value from legacy ERP systems without the risk, cost, and disruption of replacement. By treating the ERP as a system of record and wrapping it in a modern API layer, the platform enables digital transformation initiatives—mobile workforce enablement, AI-powered business assistants, real-time analytics, and multi-channel commerce—that would otherwise remain blocked for years. The architecture is deliberately non-invasive, meaning organizations can modernize incrementally, prove ROI within weeks, and scale across the enterprise without ever destabilizing their core financial and operational systems.
